

ElcoMaster Software Application – Professional Inspection Reports in Seconds

Whether you are testing adhesion in the laboratory; gloss on the production line; or thickness, profile, and cleanliness out on site - taking the measurement is only part of the story.

Only when each individual reading has been recorded, and a comprehensive inspection report created, can you then provide evidence of the work undertaken.

With even more demands on the amount of testing required, manually creating an inspection report, keying in individual readings and calculating statistics, adding gauge identification and proof of calibration, merging data and assigning photographic evidence to each set of measurements, is not only time consuming but also prone to mistakes - especially when deadlines have been squeezed. Inspectors have been known to spend up to 30% of their working week producing reports rather than inspecting.

But it doesn't have to be this way.

Whether you are working at your desk, or inspecting out on site with your mobile phone, Elcometer's free software application ElcoMaster, allows you to produce comprehensive inspection reports in minutes – wherever you are.

Simply take the readings...

Download them to ElcoMaster...

And generate your report...

...which can be emailed directly to all interested parties. It's that simple!

ElcoMaster is not only very easy to use, it is also extremely powerful – allowing you to create standard reports from built-in templates. Or create your own customised reports, combining a whole range of measurement data; from surface cleanliness to climate conditions, material or coating thickness to surface profile, adhesion to gloss measurements - all into one inspection project.

And unlike Wi-Fi connection, Elcometer gauges use Bluetooth, so you can link to more than one gauge at a time. All this and other critical information can then be included in a single inspection document, including:

- Project and batch labels;
- Gauge serial numbers;
- Calibration information;
- Notes and photographs;
- GPS coordinates to map the inspection location;
- Collection Templates, or Collects, which allow readings to be collected against an image or drawing, indicating where to measure;
- You can even add your own company logo.

Your data is also secure. You can store it on your own FTP server, or to a Dropbox or cloud account, where you can access it on any PC, or Apple or Android mobile device, anywhere in the world.

With ElcoMaster your office is now wherever you are.
